No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1983 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 16

Number 1, February 1983

C. G. Adem and J. B. Harness. Automation of a Cryopreservation Apparatus 1
Viktor Kliment, Richard Tuscany, Jan Dvořák, and Ladislav Tomášek. Computer-Assisted Analysis of Human G-Banded Chromosomes 20
C. Kleinstreuer, M. Paller, and R. J. Ponzio. Computer Simulation of Transport Phenomena during Dialysis Deglycerolization of Red Blood Cells 29
Harland Austin. An Efficient Procedure for Computing Exact Confidence Limits for a Standardized Mortality Ratio 40
Ralph S. Wiley, Lewis B. Wolfenson, and Lee S. Shepard. A Computerized System for Monitoring Systolic Time Intervals from Esophageal Accelerograms 44
M. Okada and M. Okada. A Method for Quantification of Alternate Pronation and Supination of Forearms 59
Ellen M. Johnson and J. J. Capowski. A System for the Three-Dimensional Reconstruction of Biological Structures 79
Kenneth H. Gerber, Sharon L. Norris, Robert A. Slutsky, William L. Ashburn, and Charles B. Higgins. Quantitative Phase Analysis of Exercise Radionuclide Left Ventriculography in Normals and Patients with Coronary Artery Disease 88

Number 2, April 1983

O. Brian Allen. A Guide to the Analysis of Growth Curve Data with Special Reference to SAS 101
Donald G. Thomas and John J. Gart. Stratified Trend and Homogeneity Analyses of Proportions and Life Table Data 116
Robert D. Bremel, E. Octy Owens, Gillian M. Olins, and Christopher M. Anderson. Determination of Myosin Light Chain Phosphorylation Using Astronomical Image Analysis Programs on Autoradiographs of Electrophoretic Gels 127
Thomas D. Koepsell. A FORTRAN Program for Stratified Analysis of Data from Case-Control Studies 136
N. J. D. Nagelkerke and J. Oosting. The Fitting of Growth Curves Using Constrained Splines 144
G. Q. Maguire, Jr., M. E. Noz, J. H. Schimpf, and S. C. Horii. Gamma Camera MTF Measurements Using an Image Chain Analysis Approach 149

GILLES FORGET AND PIERRE SIROIS. Development of a Radioimmunoassay Data Analysis Pack (RIADAP) in Level II Basic for Microcomputers 160
KAM-SHING LAM, CRAIG TABORSKY, AND WING-CHEE LAM. An On-Line Data Acquisition System for Radiation Therapy: External Photon and Electron Beams 169
YEHUDA SALU. Computer Simulations of Learning in Neural Systems . 176
MANUEL PAIVA. Diffusion and Convection in a Branching Tube 190

NUMBER 3, JUNE 1983

JANICE S. AIKINS, JOHN C. KUNZ, EDWARD H. SHORTLIFFE, AND ROBERT J. FALLAT. PUFF: An Expert System for Interpretation of Pulmonary Function Data 199
DAVID KURTZ, AND KATHLEEN A. MORRISH. A Microcomputer Approach to Storage of Qualitative Patient Data Using Key Words ... 209
MASAHIKO OKADA. A Method for Estimating Renal Functions Based on the Radioisotope Renogram 218
ROBERT A. SLUTSKY, VALMIK BHARGAVA, AND CHARLES B. HIGGINS. The Accuracy of Radionuclide Ventriculography in the Analysis of Left Ventricular Ejection Fraction 234
DONALD W. SIMBORG, MIKE CHADWICK, QUINN E. WHITING-O'KEEFE, STEPHEN G. TOLCHIN, STEVEN A. KAHN, AND ERIC S. BERGAN. Local Area Networks and the Hospital 247
TOM SORAHAN AND J. A. H. WATERHOUSE. The Generation of Simulated Data in the Form of Industrial Cohorts 260
ADRIAAN LIGTENBERG AND MURAT KUNT. A Robust-Digital QRS-Detection Algorithm for Arrhythmia Monitoring 273
W. J. GECKLE AND R. E. JENKINS. Computer-Aided Measurement of Transverse Axon Sections for Morphology Studies 287
HUBERT A. SCOBLE, MONA ZAKARIA, PHYLLIS R. BROWN, AND HORACE F. MARTIN. Liquid Chromatographic Profile Classification of Acute and Chronic Leukemias 300

NUMBER 4, AUGUST 1983

KENNETH P. BIRMAN. Using SEEK for Multichannel Pattern Recognition 311
D. SAPOZNIKOV, D. A. HALON, B. S. LEWIS, AND M. S. GOTSMAN. A Graphic Computerized System for Reporting and Analysis of Coronary Angiograms 334

ANSELMO A. LASTRA, EDWARD L. C. PRITCHETT, MICHAEL J. REITER, MARK S. SMITH, AND WILLIAM M. SMITH. A System for the Analysis of Long-Term Electrocardiographic Studies in Clinical Research and Training 340
G. ZAJICEK, M. SHOHAT, Y. MELNIK, AND A. YEGER. Image Analysis of Nucleated Red Blood Cells 347
FREDERICK H. SCHMIDT. A Mathematical Model for Estimation of Infarct Size from Serum Creatine Phosphokinase 357
JEFFREY D. HORBAR. Revising Ranked Probabilities: A Bayesian Approach to Incomplete Knowledge 367
R. H. FRIEDMAN AND A. D. FRANK. Use of Conditional Rule Structure to Automate Clinical Decision Support: A Comparison of Artificial Intelligence and Deterministic Programming Techniques 378
RICHARD D. BLAND AND WILLIAM C. SHOEMAKER. The Severity Index Score as a Method for Data Reduction in the Surgical ICU 395

NUMBER 5, OCTOBER 1983

TAKASHI BAN. Computer Analysis of Prolongation of Cardiac Action Potential Duration 403
J. H. VAN BEMMEL, A. HASMAN, P. C. G. M. SOLLET, AND A. F. L. VETH. Training in Medical Informatics 414
G. E. DOWER, D. BERGHOFER, AND M. KIELY. Accuracy of Computer Measurements of QRS Duration Using Spatial Magnitude–Agreement with Human Readers 433
YOSHIYUKI HORII. Utterance and Pause Lengths and Frequencies in Oral Readings by Superior Esophageal Speakers and by Normal Speakers 446
MAREK MALIK, THOMAS COCHRANE, AND A. JOHN CAMM. Computer Simulation of the Cardiac Conduction System 454
K. C. YEH. Design and Pharmacokinetic Application of an Analog Computer Program (MULS) for Multiple Dose Simulation 469
G. RICHARDS, D. W. WILSON, AND K. GRIFFITHS. Computer-Aided Assessment of Receptor Status in Human Breast Cancer 483

NUMBER 6, DECEMBER 1983

JAY G. HOROWITZ, STEPHEN D. SIEGEL, FRANK P. PRIMIANO, JR., AND EDWARD H. CHESTER. Computation of Respiratory Impedance from Forced Sinusoidal Oscillations during Breathing 499
P. I. POLIMENI, S. WILLIAMS, AND H. WEISMAN. Application of an Automatic Electronic Image Analyzer to the Measurement of Myocardial Extracellular Space 522

Richard M. Engeman, George D. Swanson, and Richard H. Jones. Optimal Frequency Locations for Estimating Model Parameters in Studies on Respiratory Control 531
Estelle Russek, Richard A. Kronmal, and Lloyd D. Fisher. The Effect of Assuming Independence in Applying Bayes' Theorem to Risk Estimation and Classification in Diagnosis 537
G. Zajicek and M. Shohat. On the Classification of Nucleated Red Blood Cells 553
Richard W. Hall. Image Processing Algorithms for Eye Movement Monitoring 563
Yu-Man Matthew Wong, Robert P. Thompson, Loren Cobb, and Timothy P. Fitzharris. Computer Reconstruction of Serial Sections 580
Richard J. Caplan, Gary M. Marsh, and Philip E. Enterline. A Generalized Effective Exposure Modeling Program for Assessing Dose–Response in Epidemiologic Investigations 587
Rainer Facius. A Third Order Iterative Procedure for Computing Exact Confidence Limits for Poisson Expectation Values 597
Author Index for Volume 16 600

Information for Authors

Computers and Biomedical Research accepts papers with the understanding that they are contributed solely to this Journal and consist of new research material not published previously except as an abstract or review or tutorial articles clearly labeled as such, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Computers and Biomedical Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

All manuscripts should be submitted to the Editor:

Dr. Homer R. Warner
Department of Medical Biophysics and Computing
LDS Hospital
325 Eighth Avenue
Salt Lake City, Utah 84143

Whenever a previously published paper by the author is important background for methods, data, or discussion in a manuscript, two reprints of the paper containing such material should accompany the manuscript to assist reviewers.

Manuscripts returned to authors for revision are considered "accepted for publication" as of the date an acceptable revised complete manuscript is returned to the editorial office. The editors and publishers cannot assume responsibility for manuscripts lost in the mail. Authors should therefore retain a complete copy for their files.

Form. Manuscripts should be typewritten and double-spaced throughout (including tables, footnotes, references, and figure captions); the original typescript should be prepared on one side of a good grade of $8\frac{1}{2} \times 11$-inch white paper, with 1-inch margins on all sides. Mimeographed or duplicated manuscripts will be accepted *if they are indistinguishable from good typed copies.*

Submit two complete copies in order to expedite processing of the manuscript. Each copy *must* include all figures and tables.

Number the pages consecutively. *Page 1* should contain the article title, author(s), and affiliation(s); at the bottom of the page type a short running head title not exceeding 45 characters (including spaces), and the name and complete mailing address (including zip code) of the person to whom proofs should be sent. *Page 2* should contain a short abstract, approximately 100 to 150 words in length.

Headings. The organization of the paper must be clearly indicated by appropriate headings and subheadings.

Abbreviations. Do not use final periods after abbreviations of measure (cm, sec, kg, etc.) in text or in tables, except for "in." (inch). Use the American Chemical Society *Handbook for Authors,* 1978, as a guide.

List of Symbols. A typewritten list of identified symbols should be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Equations. Number equations consecutively, with the number placed in square brackets to the extreme right of the equation. Refer to equations as Eq. [3] or simply [3] except at the beginning of a sentence, when the word Equation should be spelled out. Punctuate equations to conform to their place in the syntax of the sentence.

Footnotes. Use only when absolutely necessary, in which case type the footnotes consecutively, double-spaced, on a separate sheet of paper in the order of their appearance in the text. Use Arabic numbers 1, 2, etc. In the text refer footnotes by superscript 1, 2, etc. Footnotes to the title should be indicated by superscript*, †, etc.

Tables. Number tables consecutively with Arabic numerals in order of their appearance in the text. Type each table, double-spaced throughout, on a separate sheet; avoid vertical rules. Supply a short descriptive title below the table number. Type table footnotes, lettered *a*, *b*, etc., at the end of the table.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

It is essential that all illustrations be drawn with a lettering set, and therefore in finished form ready for the engraver. Lettering on the original drawing should be large enough to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2} \times 11$ inches, with coordinates properly labeled; grid lines that are to show in the engraving should be inked in black. Photographs should be submitted as glossy prints (5×7 or 8×10 inches) and not marred by staples, paper clips, or pencil marks. Original drawings no larger than $8\frac{1}{2} \times 11$ inches are preferred.

Xerox copies are not acceptable.

Charges to authors. Exceptionally numerous illustrations or elaborate tables will require special arrangement with the publisher for sharing the cost of reproduction. Color figures or plates will be accepted only at the author's expense for engraving, printing, and handling.

References. These should be cited in the text by consecutive underlined numbers in parentheses and listed at the end of the paper in numerical order. Note the following style for book and journal citations:

1. Harris, J. A., Melby, Gordon M., and Bickford, Reginald G. Computer-controlled multidimensional display device for investigation and modeling of physiologic systems. *Comput. Biomed. Res.* **2,** 519 (1969).
2. Sterling, T. D., and Perry, H. Computation of radiation dosages. *In* "Computers in Biomedical Research" (R. W. Stacy and B. D. Waxman, Eds.), Vol. 1, pp. 439–464. Academic Press, New York, 1965.
3. Winters, R. W., Engel, K., and Dell, R. B. "Acid Base Physiology in Medicine, a Self Instruction Program." The London Co., Westlake, Ohio, 1967.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1980. Unpublished observations and personal communications should be cited in the text as such, and should not be included in the reference list.

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. 50 reprints will be supplied free of charge. Additional reprints can be ordered on the form accompanying galley proof.
